

(a) Frozen task contract

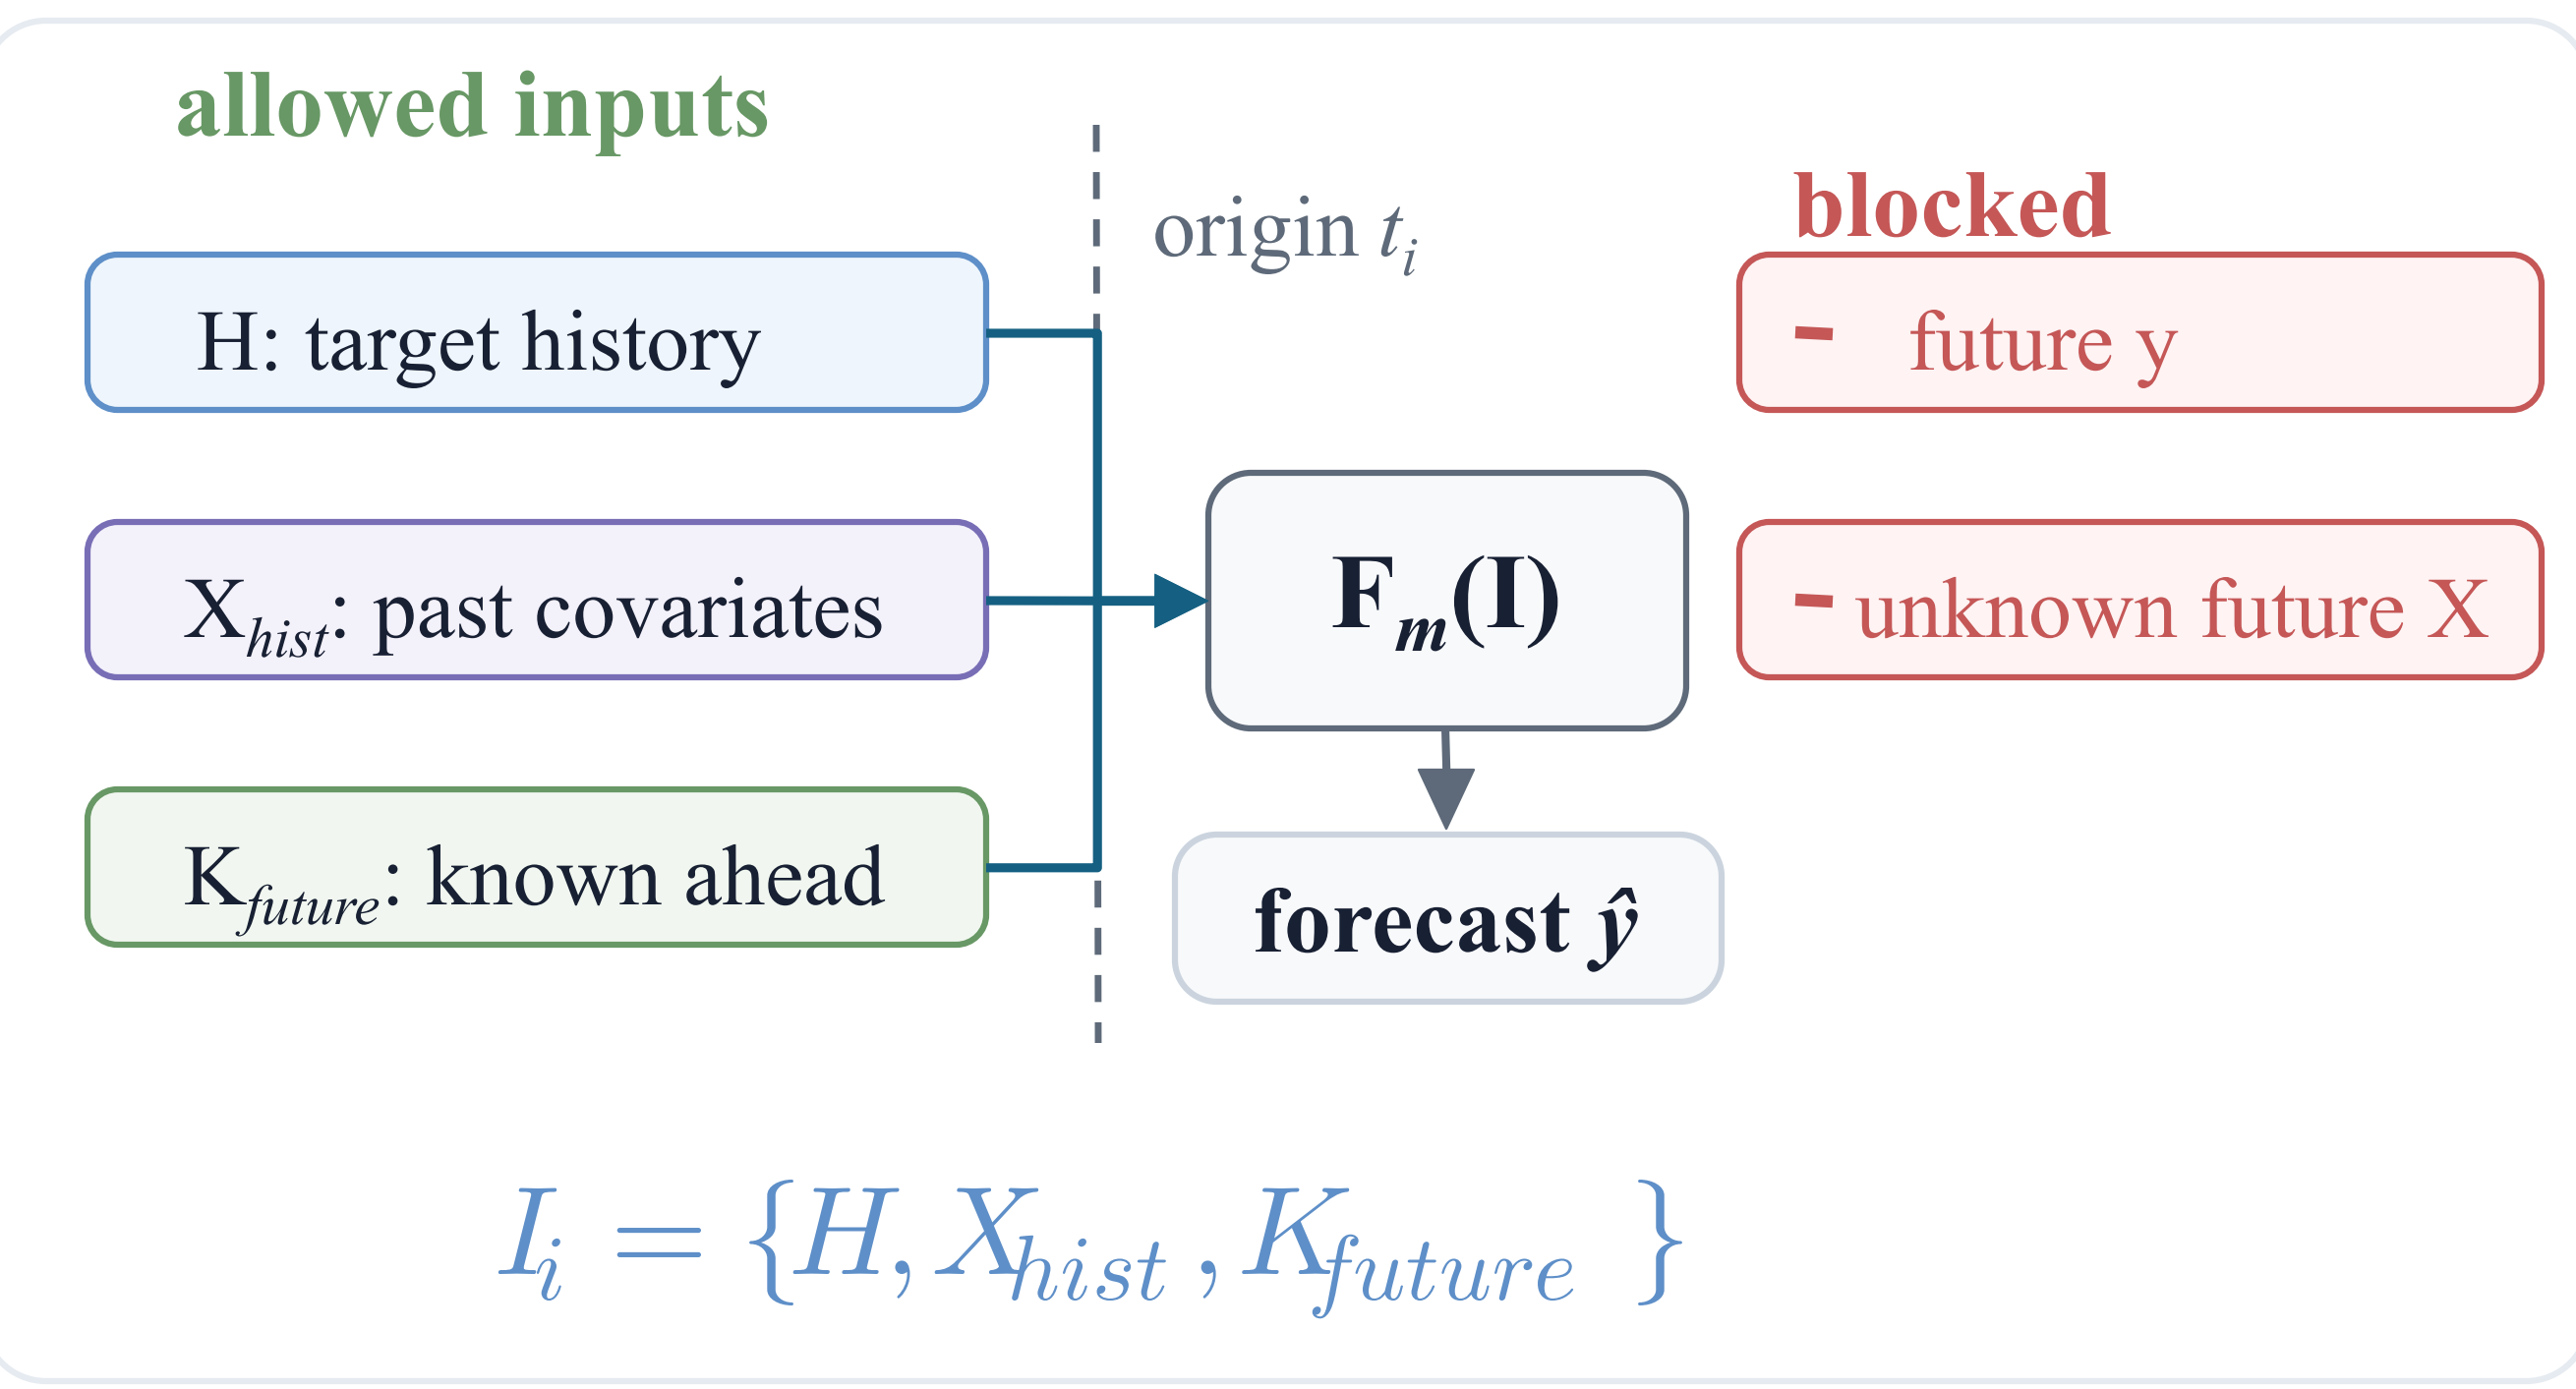

Domain-horizon cells $C = D \times \{4 \text{ h}, 24 \text{ h}\}$

Energy domain	4 h	24 h
 AIDC power		
 Aluminum load		
 Arena PV		
 Microgrid load		
 Provincial load		

Endpoint split

Origin-time information boundary

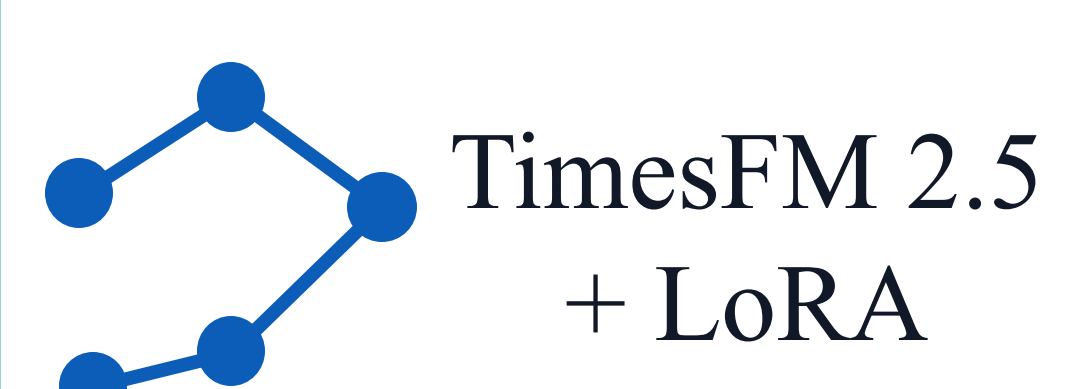

(b) Verified route pool

Route object

$$\mathbf{m} = (\mathbf{B}, \omega, \mathbf{a}, \mathbf{X}, \Theta, \mathbf{E})$$

$\mathbf{B}$ backbone ω checkpoint $\mathbf{a}$ adapt. $\mathbf{X}$ covariates Θ search $\mathbf{E}$ Execution

TSFM routes

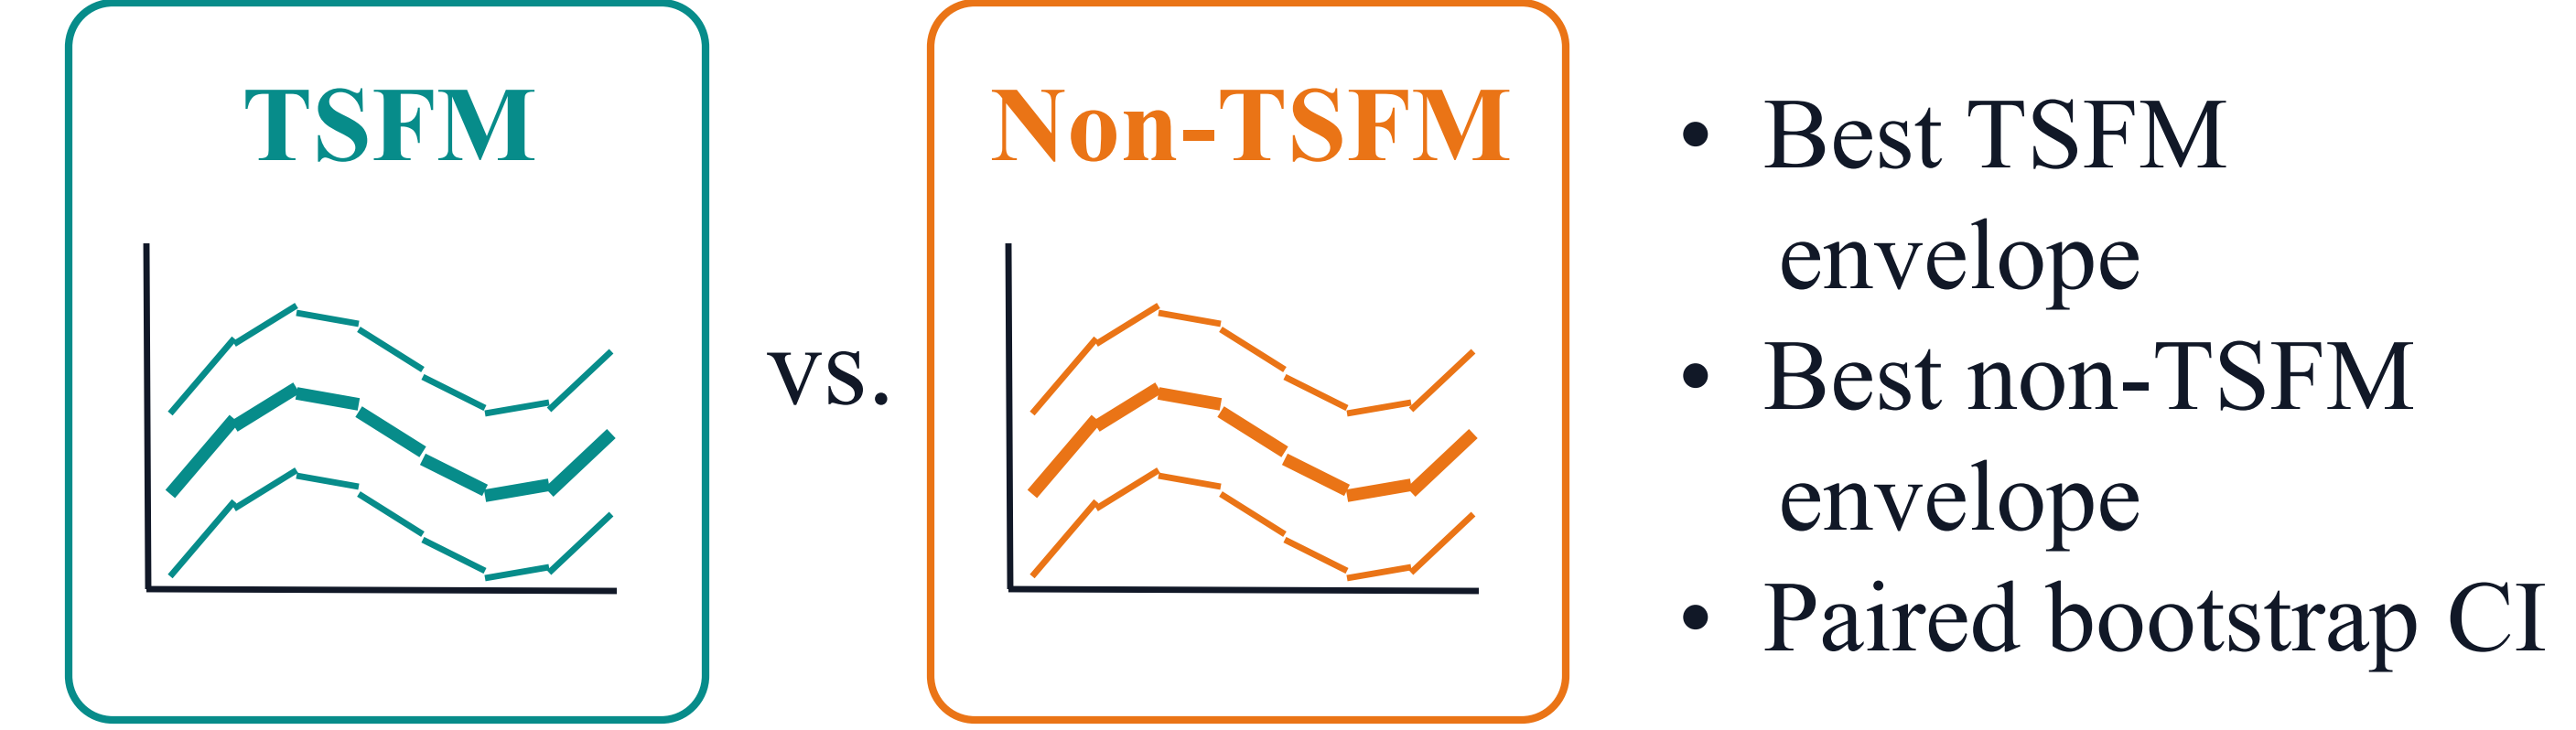

Non-TSFM routes

 Common target • same windows • same evaluator

(c) Locked evidence chain

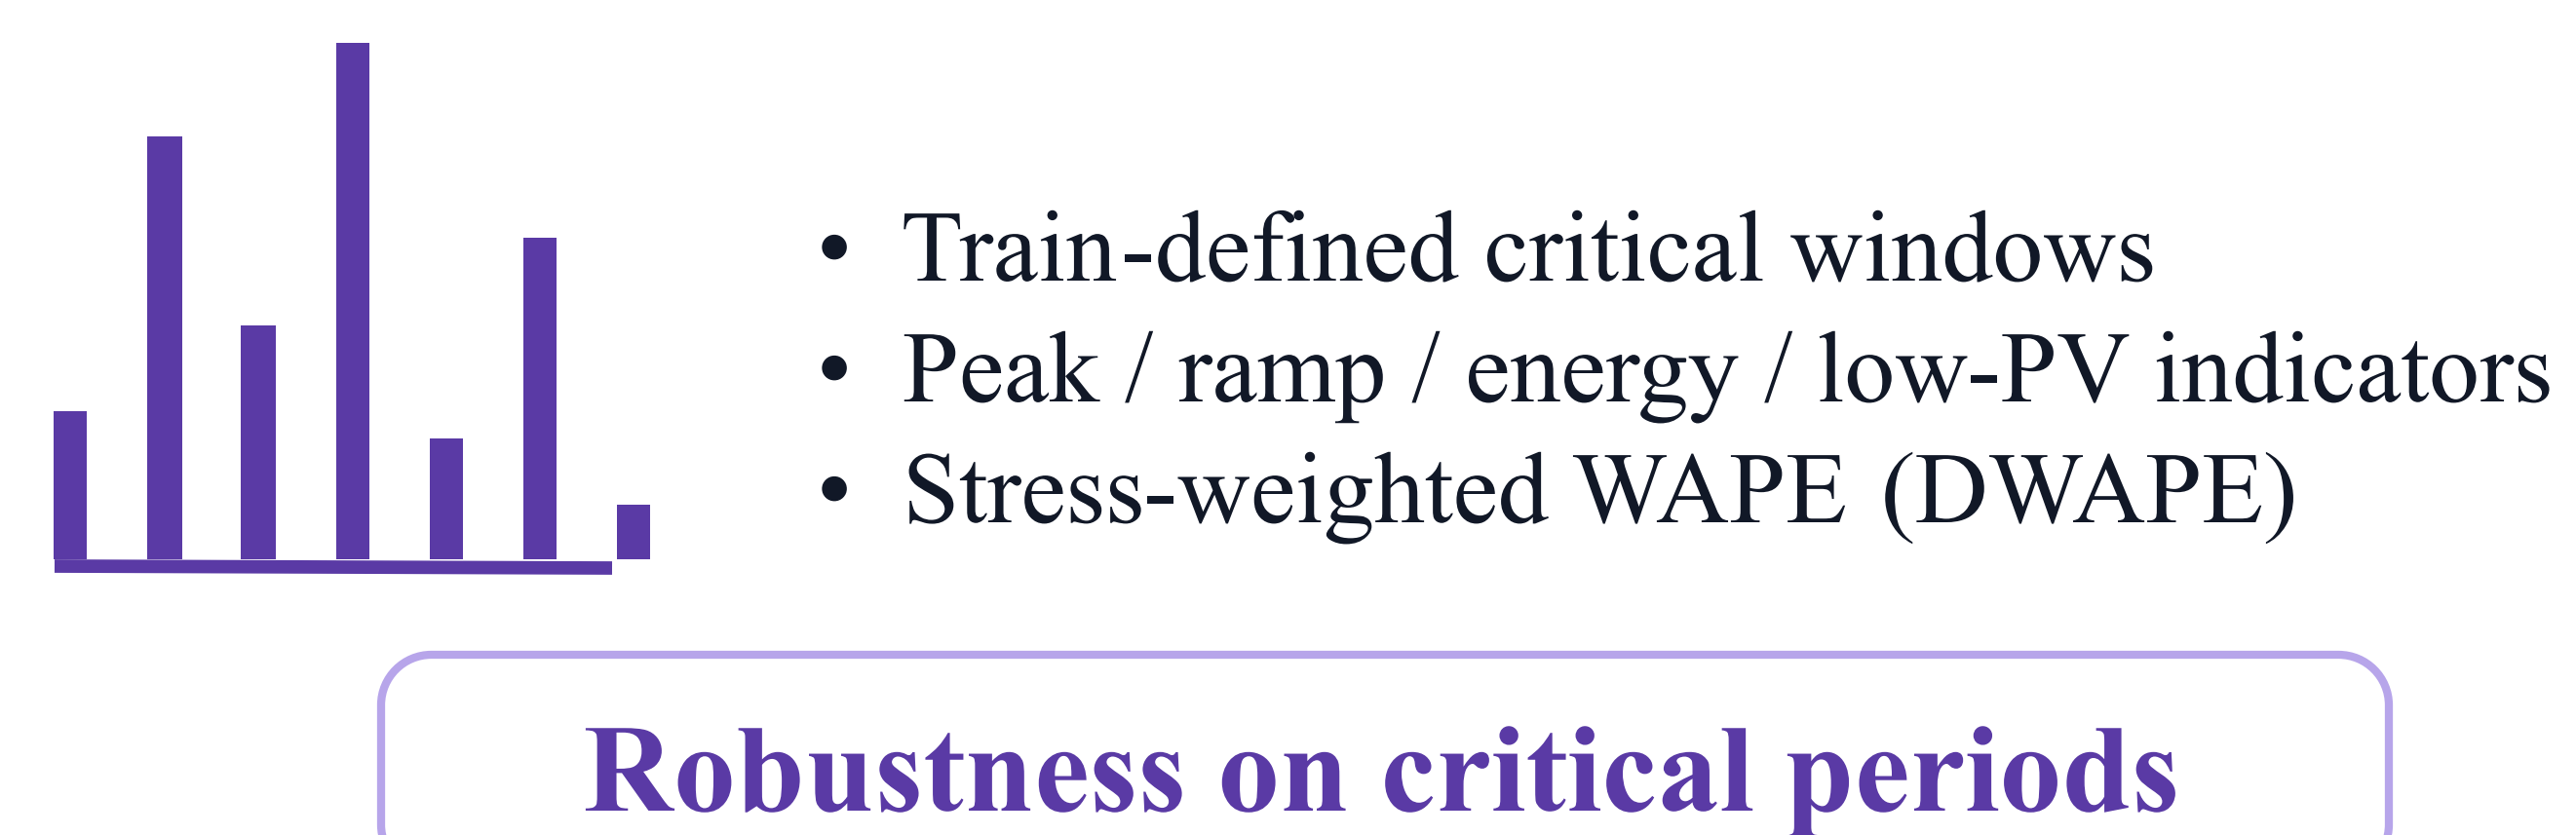

H1 Cell-level route capacity

H2 Validation-locked invocation

H3 Stress-window evaluation

(d) Formal Outputs

Release objects

 **Qualified route set**
cell-level TSFM specialist map

 **Locked routing policy**
 $\pi(c)$ fixed before formal test

 **Metrics and uncertainty**
WAPE, bootstrap CI, latency, VRAM

 **Reproducible artifacts**
code, windows, predictions, figures

Claim boundary

No post-test tuning
No threshold fitting
No claim strengthening
